

Ionizing gun designed for safe, effective contaminant removal for industrial applications

NRD is pleased to announce the launch of the new Clean Room Ionizing Gun, model

P-2021-5942. Designed, assembled and packaged for use in a wide variety of clean room applications, the Clean Room Ionizing Gun utilizes NRD's proprietary Alpha Ionizing technology, providing safe, durable and highly effective static and contaminant removal.

Used with compressed air or nitrogen, the high-performance Clean Room Ionizing Gun can be utilized for sensitive surfaces and in targeting difficult areas effectively. It also provides zero-volt offset performance without the worry of the particulate contamination that commonly occurs with other types of electrical and piezo-style ionizing guns.

The convenient, easy-to-use Clean Room Ionizing Gun does not require an outside power source and is inherently balanced, eliminating the need for periodic calibration. It is also designed to be easily accessible with a hook built into the handle for convenient storage.
