

Pressure calibrator attains accuracy within $\pm 0.01\%$ of rdg

The new Yokogawa CA700

Portable Pressure Calibrator is equipped with a silicon resonant sensor that uses Yokogawa proprietary DPHARP technology. The CA700 can measure pressures with an accuracy that is within $\pm 0.01\%$ of rdg*, making it one of the most accurate portable pressure calibrators on the market. This highly accurate portable pressure calibrator features a variety of functions that includes a wide selection of measuring ranges, as found/as left data storage, and memory capacity to store calibration procedures. The Yokogawa CA700 provides an accurate and efficient calibration and verification tool for pressure/differential pressure transmitters and other types of field devices for commissioning or regular inspection.

Product features

1. Best-in-class accuracy

The calibration of high-precision field devices requires calibrators that deliver greater accuracy and high performance. The CA700 can measure pressures with an accuracy that is within $\pm 0.01\%$ of rdg*, making it one of the most accurate portable calibrators on the market. It can also output and measure current and voltage within $\pm 0.015\%$ of rdg. The CA700 is the only pressure calibrator in its price range that can generate and measure both current and voltage.

2. Functions that improve calibration efficiency

Pressure calibrator attains accuracy within $\pm 0.01\%$ of rdg

Published on Electronic Component News (<http://www.ecnmag.com>)

For more stable and efficient calibration, the CA700 is able to store the calibration procedures for pressure transmitters and switches in its internal memory. It also records data and error rates before and after calibration. The stored data can be used for purposes such as analysis of device performance and determination of maintenance frequency, thus improving device maintenance.

3. Wide measurement range

The CA700 comes in three models with a wide variety of measurement ranges. Users can thus choose the model with the desired measurement range, eliminating the need for the purchase of multiple calibrators.
