

Scalable Power Protection for Industrial Applications

Falcon Electric, Inc. launches its FN Series UPS Plus family of parallel or N+1 redundant uninterruptible power supplies that are designed to meet the power demands of semiconductor fabrication, process control, manufacturing systems and industrial infrastructures with a scalable platform and N+1 redundancy. All models support a hardwire connection to any 208V AC to 240V AC single-phase, 2-wire plus ground power source. Certain models provide a single, isolated 208V AC to 240V AC 2-wire plus ground output; other models provide an isolated 240V AC/120 AC split-phase 3-wire plus ground output. These UPSs are stand-alone units that may be connected in parallel, providing scalable systems from 3 kVA up to 24kVA.
