

## Power Supplies Deliver Wide Output Range

Offering positive, negative, or reversible polarities, Spellman High Voltage Electronics' SL2KW Series 2,000-W power supplies exhibit output voltages from 0.5 kV to 50 kV. The 2U instruments yield three-phase input power of 208 VAC with an optional 220-VAC single-phase input available. The devices provide digital metering with a fault diagnostic display, as well as remote control interfacing capability, programmable voltage and current control loops, and protection against arc and short-circuit discharge conditions. The supplies are appropriate for semiconductor processing systems, and scientific and industrial applications. The units have a modular design and resonant-based inverter topology.
