

# PCB-mount Terminal Block Features Lever-Actuated Design

The 2716 Series high-current PCB-mount terminal block from WAGO features the industry's only lever-actuated termination design for tool-free termination of conductors 24–6 AWG. There are no screw torque requirements, and the terminations are resistant to vibration and temperature cycling. Series configurations include 10mm (55A/600V) or 15mm (65A/600V) pitch variants, ranging from 2 to 8 pole configurations. Additional pole configurations, as well as a 20mm pitch variant, are available upon request. The block is available with or without a jumper slot.
