

RFID Antenna System Comes With Weatherproof Enclosure

Laird Technologies released its RFID HD RooTenna Series that offers six options of integrated RFID antennas covering 865 MHz to 960 MHz. The series integrates a high-performance RFID antenna and a compartment for reader electronics into an IP-67 rated weatherproof housing enclosure, making it appropriate for harsh environments. The antennas cover industry-standard 902 MHz to 928 MHz and 865 MHz to 868 MHz RFID frequencies, as well as a wide band version for 865 MHz to 960 MHz. The series offers six different circularly -polarized UHF antenna options that are available in a choice of right-hand (RH) and left-hand (LH) circular polarization. Features include low VSWR, axial ratio, and a fixed SMA connector.
