Portable Marking System Designed for Hand Held Applications

The Mini Mark is a small portable dot peen marking system designed for both hand held applications and integration into existing and new machinery.

The system features preloaded leadscrews and ball slides for machine tool quality performance and durability. 12 mounting holes are provided for flexibility in mounting at virtually any position / angle. The controls (detached) feature the latest in embedded technology with CF card storage and network (LAN) & RS-232 connectivity.

The popular Type & Mark function allows user to begin marking without learning new software or reading complex manuals. All features such as graphic importing, 2-D data-matrix marking, etc are included; all this in a generous 2.2 x 2.5 marking area.

Stick, Dot or Radius fonts are included.
