

World's First Universal UV Cell Phone Sanitizer

The Spectroline® CellBlaster™ is the world's first universal UV cell phone sanitizer. It uses powerful germicidal UV light to “blast away” germs, bacteria and viruses on virtually any hand-held personal device — in just 30 seconds! The CellBlaster's universal design works with all types of cell phones, including flip phones, slider phones, BlackBerry devices, iPhones and other smartphones, as well as PDAs, iPods, MP3 players and more.

When kept in pockets, handbags and briefcases, cell phones and other hand-held personal devices retain moisture and warmth, becoming a breeding ground for disease-causing microorganisms. In fact, the average cell phone contains more germs than a typical toilet seat!

That's why Spectronics Corporation — the world leader in UV technology — developed the CellBlaster. Its short-wave UV light kills Strep, Staph, E. coli, Salmonella, Listeria, the H1N1 flu virus and much more.

The CellBlaster is easy to use. Simply insert the device and close the cover — sanitizing begins immediately and finishes in just 30 seconds! The extra-long, ultra-powerful germicidal UV tube and super-reflective scanning bed eliminate 99.9% of pathogens.
