

HotSpot Episode 2: Wearable gesture control

This week on WDD's Hotspot:

- Thalmic Labs has introduced its wearable gesture-controlled arm band -- Myo; which is capable of measuring electrical activity in muscle movements instantly, providing a seamless way to wirelessly control video games, phones, and other digital devices.
- Hewlett-Packard has re-entered the tablet market with its wallet-friendly, Slate 7 device, which features a 13-ounce frame, housing a 7-inch 1024 X 600 display.
- Microchip has announced its BodyCam Technology, providing designers with the world's first framework for using the human body as a secure communication tool.
- InfoMotion Sports Technologies has unveiled its 94Fifty sensor basketball that measures basketball skills in real time.
